

Our goal is to provide affordable Green PCs to organizations committed to climate change.

The World's First Green Virtualized PC.

Highly recyclable and virtualized, Verdio has been designed with energy efficiency and the environment in mind.

Energy Efficient

EcomNets utilizes energy efficient hardware and software for Verdio, so we're able to design a Green PC. Our engineers were tasked with designing a greener product that uses less electricity. For instance, to reduce energy consumption, the system is uses less parts, and is designed to operate virtualization software.

Highly Recyclable

The sleek enclosure of the Verdio is made of highly recyclable aluminum, instead of toxic plastics, which may end up in landfills in China or India. Since aluminum is a highly recyclable, this raw material used in the Verdio aluminum case can be reused in other products.

Certifications

EcomNets is submitting Verdio for many certifications; including: Energy Star, EPEAT, The Green Grid and Climate Savers Computing.
