

api for unsupported RAID array

[rob](#) 2 posts since

Jan 30, 2009 The servers we are using with esxi have an unsupported RAID array and was wondering if we could create an API to fix the problem we are having with this raid array. I am desperate and we need a solution to fix our issue. The server works but we need to make it so the people in the field can setup it up with out dealing with a certain complication we have with the RAID. Basically the RAID does not see the virtual drive it sees both drives and sometimes works when you install it and sometimes it does not work. We need to make it so that ESXi sees one virtual drive and installs into that drive. Please let me know if this is possible at all Tags: esxi, api, for, unsupported, raid, is, unable, to, see, the, virtual, drive, it, sees, both, drives

First off, this is the wrong place to ask a question like this, this is discussion for VMWorld.

You want to be asking this in the forums at www.vmware.com. [This](#) looks like a good place to post the question.

Go start this discussion there, and while your at it, check your hardware if its on the HCL. Check here: <http://www.vmware.com/resources/compatibility/search.php>
